Etyvo

Getting started

Etyvo is a background dictionary. Highlight a word in any app, press a shortcut, and see what it means in the sentence you are reading.

Install and activate

1. Download the installer from aquietdesk.com/etyvo/download and run **Etyvo_x.y.z_x64-setup.exe**.
2. Windows may show “Windows protected your PC” because Etyvo is from a new publisher. Choose **More info**, then **Run anyway**.
3. Etyvo asks for your licence key. It is on your order confirmation email and on your purchases page (aquietdesk.com/portal). Paste it and choose **Activate**. This needs the internet once; after that Etyvo works offline.
4. Etyvo opens with one sentence to try it on.

Look up a word

1. In any app, highlight a word. Double-clicking it is enough.
2. Press Ctrl Shift D.
3. A small window opens beside your pointer with the meaning that fits the sentence. Press Esc or click elsewhere to close it.

Highlight a whole sentence instead and Etyvo shows it back to you, so you can click the word you want. If the meaning is not the right one, open **other meanings** and click the one that is. Your word list keeps the one you pick.

Review

Open Etyvo from the tray icon next to the clock and choose **Review**. You see the word in the sentence you found it in. Say the meaning to yourself, press Space to check, then grade yourself:

Button	Means	The word comes back

Again	I had forgotten it	later in this session, then tomorrow
Hard	I got it, with effort	on schedule, and a little sooner in future
Good	I remembered it	on schedule: 1 day, 6 days, then growing gaps
Easy	I knew it at once	on schedule, and a little later in future

A few minutes a day is enough.

Good to know

- Etyvo keeps running in the tray after you close its window. Right-click the tray icon to pause the shortcut or quit.
- Turn on **Start with Windows** in Settings so the shortcut is always ready.
- Change the shortcut in Settings if another program already uses it.
- In a few apps Etyvo can read the word but not the sentence around it. The popup then shows the most common meaning. Highlighting the whole sentence and clicking the word gets the sentence in.
- The dictionary is English only.
- Your words live in one file on your PC. Settings can export them to a spreadsheet or Anki, and save or restore a backup.
- One key works on up to 3 of your PCs. To move Etyvo to a new PC, choose **Remove from this PC** in Settings on the old one first, or free the PC up on your purchases page.
